

// brand guidelines · v1.0

Zain M. Al-Mawla.

A personal brand built in the late-night editor —
Tokyo Night, JetBrains Mono, restraint over noise.

Z

Discipline

Fullstack Developer

Site

zainalmawla.dev

Stack

Next.js · React · TS · Python · PyTorch

Base

Ankara, Turkey

Issued

May 2026 · v1.0

The Tokyo Night Palette

Stored as HSL channels in `src/app/globals.css` so Tailwind's `hsl(var(--token))` bridge works and alpha applies via `/ <alpha-value>`.

Dark theme — default

Background #0D1117 <code>hsl(213 30% 7%)</code>	Foreground #C9D1D9 <code>hsl(213 17% 83%)</code>	Card / Secondary #161B22 <code>hsl(215 21% 11%)</code>
Muted text #8B949E <code>hsl(215 11% 57%)</code>	Primary / Accent #58A6FF <code>hsl(212 100% 67%)</code>	Border #30363D <code>hsl(215 14% 21%)</code>

Light theme — accent-preserving inversion

The accent **#0F76E0** stays close to the dark-theme blue.

light only

Use the same hierarchy — primary is rare, muted is most copy, foreground is the workhorse.

Background #FFFFFF	Foreground #1F2937	Card #FBFBFD
Muted text #586573	Primary #0F76E0	Border #D8DEE5

Semantic & syntax — secondary palette

For code, status, and small UI cues. Never promote these to primary CTAs.

		Sky — strings	Purple — functions
--	--	---------------	--------------------

Red — errors /
keywords
#FF7B72

Blue — variables /
booleans
#79C0FF

#A5D6FF

#D2A8FF

Green — decorative
#7EE787

Yellow — Linux brand
#FCC624

Status / Live
#2EA043

Coral — HazardSignal
#FF7B72

Rule: use the primary blue sparingly — one or two emphasized words per heading, plus CTAs and links.
Never combine more than three accent hues in a single view.

Two voices: Inter & JetBrains Mono

// Inter – body & headings

Hi, I'm Zain.

I build modern web experiences and AI-powered tools.

Body copy at 11pt — direct, technical, calm. Bold for headings, regular for prose.

// JetBrains Mono – code, eyebrows, badges

\$ whoami → zain@ankara

01. ABOUT · 02. TECH STACK · 03. PROJECTS · 04. EXPERIENCE · 05. CONTACT

Type scale

TOKEN	COMPUTED	USED FOR
text-xs	12 px	Badges, mono eyebrows, helper text
text-sm	14 px	Nav, captions, secondary copy
text-base	16 px	Body
text-lg	18 px	Section descriptions on sm:+
text-xl	20 px	Card titles
text-3xl / 4xl	30–36 px	Section headings (mobile → desktop)
text-6xl / 7xl	60–72 px	Hero display

The editor card pattern

developer.ts

```
const zain = {  
  name: 'Zain M. Al-Mawla',
```

```
role: 'Fullstack Developer',
stack: ['Next.js', 'Python', 'PyTorch'],
available: true,
}
```

Components, motion & voice

Buttons

Variants: default · outline · secondary · ghost · link. Sizes: sm (h-9) · default (h-10) · lg (h-12) · icon (10×10).

Motion timing

PATTERN	DURATION	CURVE
Section reveal (fadeUp)	500 ms	cubic-bezier(0.22, 1, 0.36, 1)
Button / hover transitions	200 ms	default ease
Card lift (spring)	stiffness 300	damping 24
Typewriter	90 ms / char	1600 ms pause
Gradient pan	6 s	ease infinite

All animation honors prefers-reduced-motion. If a new animation isn't in the 200–300 ms range, it needs a reason.

Voice — do / don't

DO	DON'T
"I build software end to end."	"I craft digital experiences."
"fine-tuned from Qwen on math problems"	"my own AI models"
Name the tech: Next.js, FastAPI, PyTorch.	Vague tooling: "modern stack," "cutting-edge."
Honor scope. Distinguish trained from fine-tuned.	Inflate scope. Skip past the credibility check.

Brand safety

- Don't render the Z monogram in any color other than #58A6FF (light: #0F76E0).
- Don't use raw #000000 — always #0D1117.

- Don't introduce a new sans or mono. Inter + JetBrains Mono only.
- Don't add a third heading font. Hierarchy is size + weight, not family.
